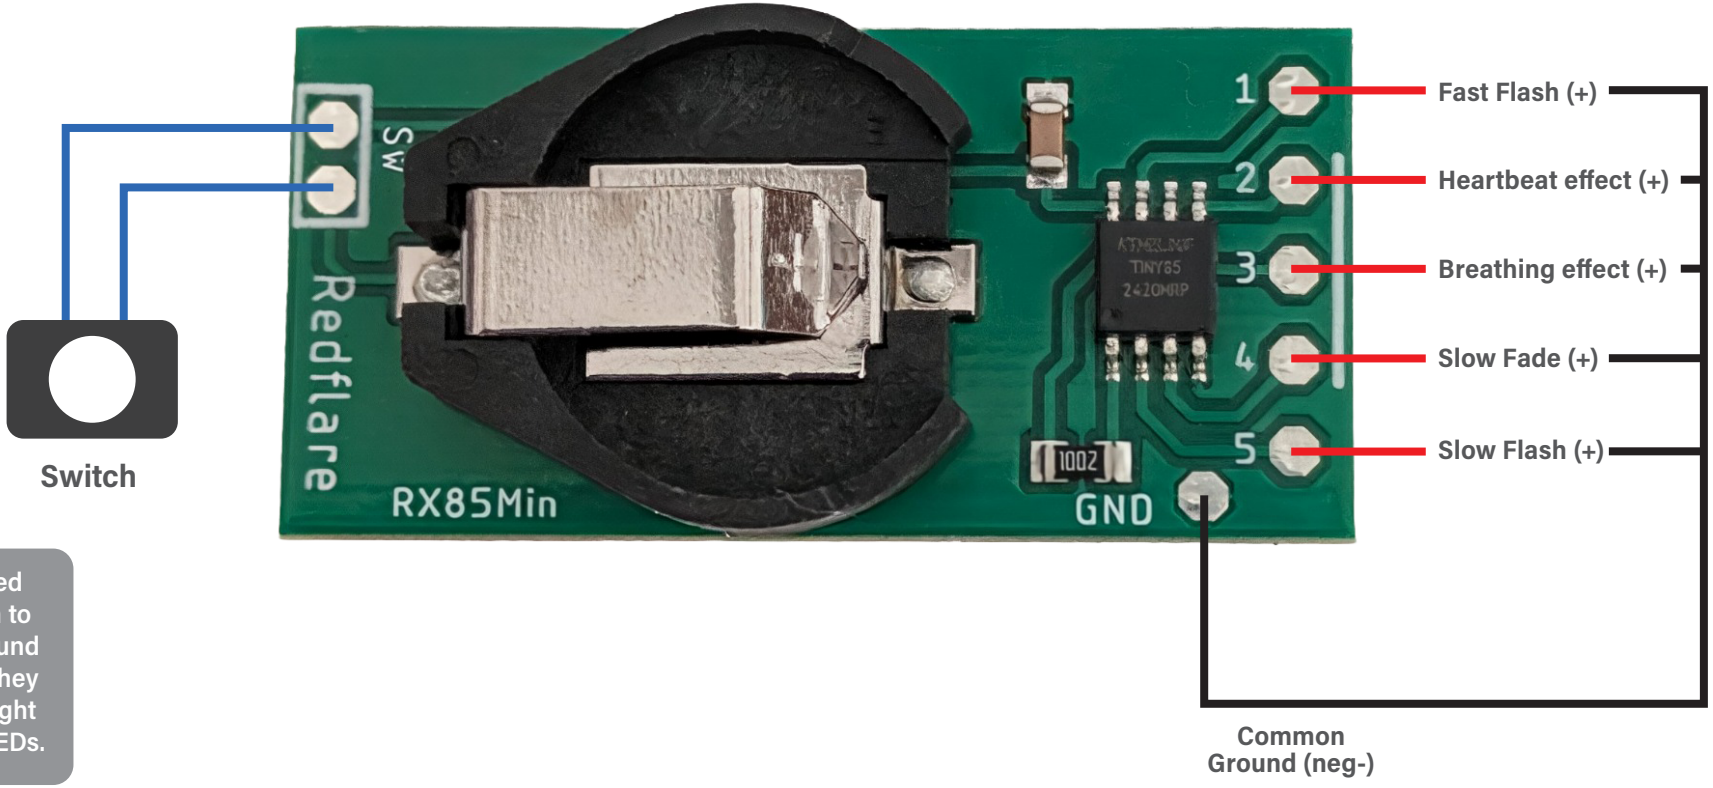
RX85mini Instructions: Heartbeat Monitor

The following diagram is the basic setup for the wiring of the RX85mini Board that comes as part of your kit. The ATTtiny board allows for 3v CR2032 Battery power and control of up to 5 LED lights.

Soldering Required

The RX85mini Board will require soldering to the pad connectors for the wiring of the LEDs and any switch.



Switch

If you plan to use red LEDs, you may wish to add a resistor of around 47ohms, otherwise they might seem a bit bright compared to other LEDs.
